

Urbanfil®

Central Park, Broadway, NSW

Central Park is a mixed-use development located on the site of the old Toohey's brewery. The site consists of residential apartment towers, offices, retail shops, restaurants and bars linked by laneways and parklands available for recreational activities. The laneways with boutique restaurants and bars come alive at night as a popular meeting place for local residents and city office workers.

Project Design Brief

Designers wanted to ensure a visual continuity of the various pavement designs used in the connecting laneways. A variety of pavement finishes were used throughout the area reflecting the heritage of the site. The new and existing underground electrical service enclosures required uniform and discreet access covers.

ACO's Solution

- Urbanfil® steel recessed access cover

Benefits

- Urbanfil® access covers have a depth of 85mm and can accommodate a variety of pavement finishes from traditional pavers and tiles (up to a depth of 25mm) through to coloured and honed concrete finishes
- The discreet 2mm edge of the cover and frame ensures minimal visual impact on the pavement
- Four high tensile M16 locking bolts per cover provide security for the enclosure contents

Other ACO Products Used

- Trench drains
